

DENTRIX® PATIENT KIOSK

For eCentral Website Manager

Patient Kiosk Will:

- Eliminate the need to manually enter patient information
- Improve the accuracy of your patient information
- Expedite your appointment process
- Improve your practice image
- Allow completion of patient forms from a variety of hardware options including Apple® iPad™.

Have you ever noticed how much time your team spends manually entering patient information from hand-completed forms? This tedious process not only consumes valuable staff time, it's conducive to errors and impairs the doctor's ability to begin treatment quickly. There is a better way. Dentrrix Patient Kiosk for Dentrrix Website Manager revolutionizes your patient form completion process for increased productivity and a better overall patient experience.

Dentrrix Integration

Adding a Dentrrix-integrated kiosk to your waiting room gives your patients the ability to complete or update forms electronically. In doing so, your team is able to receive the data in an electronic format that can be imported into Dentrrix in seconds—without manual entry.

A kiosk also improves the accuracy of your patient files. Accurate patient information is important for reducing rejected insurance claims and maintaining contact with patients. Allowing patients to enter their own data improves the accuracy of your files by eliminating the errors that result from incorrect key-punches or poor handwriting.

Giving patients the ability to update their files easily and more frequently—with each visit if necessary—also keeps your files current. And, since your team is able to review the information prior to accepting it into Dentrrix, you don't lose any control over the information going into your patient files.

Another benefit of receiving patient data electronically is that it expedites the appointment process. The doctor can begin treatment faster and keep appointments on schedule.

When your front desk team receives patient data submitted via patient kiosk, new edits are easily visible.

Family Check-in

At the conclusion of the form completion process, the intuitive kiosk software checks to see if the patient has family members with appointments on the same day. If so, the patient can begin completing forms for the additional family members without starting over each time. This feature allows a parent to complete electronic forms for children much faster than was ever possible with paper forms.

Added Convenience

In-office kiosk functionality is the perfect complement to Dentrix Website Manager's online form feature. Your patients can have the convenience of completing electronic forms from home or your waiting room. Both methods allow your team to import the data into Dentrix with ease.

Hardware Options

You have numerous hardware options for implementing a kiosk including personal computers, tablet PCs, laptops, other touch-screen computers and the Apple iPad.
